Allain James O. Ybañez

(+63) 960 676 3762 | allainjames.ybanez.23@usjr.edu.ph | GitHub | Portfolio

4th-year Computer Science student who builds software for real-world challenges around Cebu, from exam halls and jeepney routes to flood-prone barangays. Willing to adapt to new tech stacks and environments, and eager to grow into cybersecurity through Accenture's Cybersecurity Mastery Program as my practicum.

EDUCATION

University of San Jose-Recoletos | Cebu City, Cebu **Expected June 2027**

Bachelor of Science in Computer Science, major in AI and Web Development

- **Relevant Courses:** Information Assurance and Security (in progress), Data Communications and Networking, Operating Systems, Computer Organization and Architecture, Information Management, Software Engineering, Machine Learning

TECHNICAL SKILLS

Languages: Python, JavaScript

Frameworks and Libraries: OpenCV, MediaPipe, YOLOv8, scikit-learn, Pandas

Tools: Git/GitHub, Jupyter, Google Colab, Figma, Adobe Suite, Canva

Familiar with: Machine learning fundamentals at a coursework level, from our Machine Learning course. I have also used Dart and Flutter, Node.js and Express, PHP, React, MySQL, MQTT and the ESP32 in team projects.

Soft Skills: Teamwork, Adaptability, Communication

PROJECTS

AEye (Thesis) | *Python, OpenCV, MediaPipe, YOLOv8* **July 2026 – Present**

- Thesis project with a team of 3, a dual-camera exam-proctoring app that tracks eye gaze, head pose, and posture and alerts a human proctor in real time
- Worked on the side-camera module (MediaPipe posture and hand tracking, YOLOv8 phone detection), per-student calibration, and evidence logging

Haircut Policy Detector | *Python, OpenCV, scikit-learn* **May 2026**

- Personal project: a real-time camera app that flags haircut-policy violations (Haar cascades, HOG + SVM)

RFID Door Lock | *ESP32, Node.js, MQTT* **2024**

- Team ESP32 RFID door lock with an MQTT web page; worked on the code, MQTT setup, and door hardware

Save the Fuel | *Flutter, Dart* - **2nd Runner-Up, USJ-R SCS Hackathon** **Apr. 2026**

- Team hackathon project: an offline app that uses GPS and motion sensors to detect jeepney idling in Cebu traffic
- Worked on idling detection, Cebuano voice cues to cut the engine, and offline savings and fuel-price tracking

FloodGuard | *Python, Django, Angular/Ionic, Leaflet* **June 2026**

- Team flood-risk dashboard for Cebu City; built the barangay map and heatmap, and the sortable barangay table

QRx – Medicine Authenticity Verifier | *Flutter, PHP, MySQL* **Dec. 2025**

- Team app that flags counterfeit or expired medicines; worked on camera QR scanning and the voice read-out

FoodJS - Simple Food Ordering System | *React, Node.js, Express* **May 2026**

- Team web ordering app; built the backend: Express API, Google OAuth and JWT login, and password hashing

AWARDS & CERTIFICATIONS

- **2nd Runner-Up**, USJ-R School of Computer Studies Annual Hackathon (Team), 2026
- **Top 25**, CEB-I Hackathon (Team), 2026
- **TOPCIT Level 3**, Test of Practical Competency in ICT, July 2026
- **TESDA Advanced AI Upskilling Training**, attended at USJ-R
